
RAM chip select is tied to nMREQ
negate RAM's OE to prevent clashing with internal ROM
Use this only for "black COVID" special edition
When ROM is enabled, it aliases many times in lower 32K of RAM space
This now goes to OE of RAM
Once ROM is disabled, it can't be re-enable other than by reset
remove this FF allow it to be compiled
0x1F is ROM disable register
0x10-0x17 are CF interface
RTC is 0x0C
0x9E for I2C bit bang
D[0] is SCL
D[7] is SDA
